

Class vs Imported Quanties

Classes vs Imported Quantities and Purpose

Year vs Exported Quantity

Purpose vs Exported Quantity

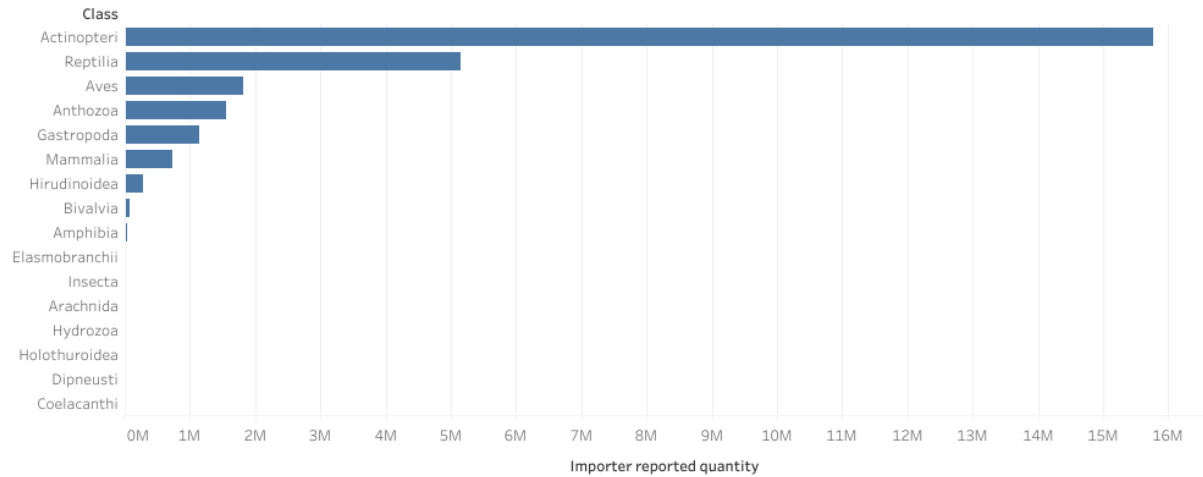

Importer and Exporter and Imported Quantity

## Story 1

Below visualization allows us to analyze the total number of wildlife classes being imported. We can observe that Actinopteri class is the most imported class followed by Reptilia.

Observation:- The most imported wildlife class is **Actinopteri**, followed by **Reptilia**.

## Story 2

Below chart allows us to visualize how the number of exported quantities have changed over the year.  
We can observe that 40 Million species were exported in 2016 and this number was reduced in 2017.

Observation:- Export quantities have significantly decreased from **40 million species** in 2016 to **20 million species** in 2017.

## Story 3

The attached visualization allows us to analyze the imported quantity of each class distributed according to their purpose. We can observe that most of the species are imported for the purpose of Trade.

Observation:- The primary purpose of importing wildlife species is **Trade**, with the largest quantities imported for this reason.

## Story 4

Following pie chart shows us the purpose that the species are mostly exported for. And we can observe that mostly they exported for Trading purpose

Purpose

B  
E  
G  
H  
L  
M  
N  
P  
Q  
S  
T  
Z

Exporter reported quanti..  
105,056,175

Observation:- The pie chart shows that **trading** overwhelmingly dominates, with very small proportions allocated to other purposes, suggesting that most wildlife species are exported for trading purposes.

## Story 5

Below we can observe the countries which carried out the import and export and what was the imported quantity. We can observe that Taiwan exports most species and US is one of the biggest importers.

### Observation:-

The United States (US) appears frequently and in various sizes, indicating it is one of the biggest importers across multiple categories or products.

Several large circles contain country codes like MY (Malaysia), NL (Netherlands), JP (Japan), and CN (China), suggesting these countries are also significant in terms of import/export quantities for certain goods.

There's a diverse range of country codes visible (e.g., DE, IT, FR, SG, HK), indicating a complex global trade network involving many nations.

The varying sizes of the circles imply different scales of trade for different country pairs or product categories.
